

Digital Image Processing Lab Experiments Name:

Lab 01:

- Experiment on Display an image.

Lab 02:

- Experiment on Invert an image.
- Experiment on Histogram Plotting.
- Image Enhancement using Contrast Stretching.

Lab 03:

- Plot Histogram Equalization, Histogram Specification & CDF.

Lab 04:

- Image Filtering using Mean filter, Median Filter and Gaussian Filter.
- Image Resizing using Replication method, Linear Interpolation method and Pixel skipping method.
- Draw an original image, and add salt and pepper noise with it and then draw the filtered image of that noisy image.

Lab 05:

- Edge Detection of an image using Robert operator, Sobel Operator and Isotropic Operator.

Lab 06:

- Conversion of a RGB color model to HSI color model.
- Convert a RGB image to Gray Scale image.
- Separate Red Channel, Green Channel and Blue Channel from a RGB image.

Lab 07:

- Dilation Operation of an image.
- Erosion Operation of an image.
- Opening & Closing Operation of an image.
- FFT (Fast Fourier Transform) Operation of multiple images.
- Homomorphic Transform Operation of an image.

Lab 08:

- Take an image and apply Gaussian, Rayleigh, erlang Noise on that image.
- Removal of Salt and Pepper noise
- Removal of Periodic Noise.

Lab 09:

- Hough Transform technique (Line + Circle)
